Course selection

The ten-week quarter is short and intense, and can be challenging for students who are accustomed to semester terms.

Not every course is offered each quarter or each year. It might not be possible to enroll in your preferred courses. Be prepared to make alternate course selections.

Mathematics (MATH) 42, 106, 116, 117, 118, 123, 135, 142, 146, M148, 151A, 151B, 155, 156, 164, 167, 168, 170E, 171, 178C, 179, 182 are in high demand and enrollment is prioritized for UCLA degree-seeking students who need the course to graduate.

In addition, **do not plan to enroll** in these highly impacted Mathematics courses:

- MATH 174E: Mathematics of Finance for Mathematics/Economics Students
- MATH 177: Theory of Interest and Applications
- MATH 178A: Foundations of Actuarial Mathematics: Life Insurance and Annuities
- MATH 178B: Foundations of Actuarial Mathematics: Additional Topics in Long-Term Actuarial Mathematics

An exception to enrolling in **Mathematics 174E, 177, 178A, 178B** will be considered only if there is still a lot of space available in the middle of the second week of the quarter.

Review [course descriptions](#).

Enrollment

You will manage your enrollment through [MyUCLA](#) but may need assistance from the Mathematics department academic advisor for certain courses.

Do not wait until you arrive at UCLA; classes will likely be full long before the start of the term.

You may enroll in graduate courses (numbered 200 and above) only if you obtain the permission of the instructor.

Non-mathematics courses

You must enroll in a minimum of 12 units to remain in good academic standing. You may choose courses from other departments (history, English, political science, etc.). If you are unable to enroll on your own through [MyUCLA](#), contact the academic advisor at the department offering the course.
